DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 10-12, drawn to a method, classified in class 134, subclass 1.1.
 - II. Claims 1-9, drawn to an apparatus, classified in class 118, subclass 728.
- 2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus could be used for vapor deposition.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Dick Fichter on 11/06/02 a provisional election was made with traverse to prosecute the invention of Group II, claims 1-9 Affirmation of this election must be made by applicant in replying to this Office action. Claims 10-12 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1- 7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Harada et al (US 5112641). Harada et al disclose a reaction chamber (Fig 12-12) for processing a plurality of process substrates loaded on a boat, a stocker to store dummy substrates (Fig 12 -7 or 2) and gas means for processing (inherent because it is disclosed to be a CVD apparatus see abstract).

Claims 2, 3, 6-7 and 9 are rejected as being directed to an intended use.

Claims 4 and 5 cite only a product, which may be processed by the claimed apparatus and therefore not patentable.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Harada et al (US 5112641) in view of Nakajima et al (US 5858103). Harada et al disclose a reaction chamber for processing a plurality of process substrates loaded on a boat.

Harada et al do not disclose that the boat is made of quartz.

Nakajima et al disclose a quartz boat inside their reaction chamber (Col 1 line 18-19).

Therefore it would be obvious for one of ordinary skill in the art at the time invention was made to use quartz boat for its cleanliness from contamination and stability at high temperature.
